Tarangire To Ndutu & Serengeti

Staring price at

$3930

Tarangire to Ndutu & Serengeti – Wildebeest Calving

This safari is a great choice for travelers who want to see the Great Migration in the Ndutu region during the calving season, while also exploring the wildlife-rich landscapes of Central Serengeti. From January to February, the southern plains come alive with newborn wildebeest — and plenty of predators nearby.

With two nights in both Ndutu and Central Serengeti, this itinerary gives you just the right amount of time in each area. You'll also visit Tarangire National Park, famous for its baobabs and elephants, and the Ngorongoro Crater — a collapsed volcanic caldera that holds one of the highest concentrations of wildlife in all of Africa

Bonus: Along the way, you'll stay in comfortable mid-range lodges and camps, including Awali Camp — the newest addition to our collection! It's a stylish property with only 10 tents and a fantastic location between southern and central Serengeti. It's a step above typical budget options, offering a more intimate atmosphere and special discounted rates for our guests.

1. **ARRIVAL**

The group arrives at Kilimanjaro Airport (JRO). Participants are met by a representative of Black Eagle tours and safaris and transferred to a hotel in Arusha

2.Tarangire National Park

Today your safari will take place in Tarangire National Park. This is one of the most interesting places in Tanzania! The river of the same name flows through the park, where giraffes, zebras, antelopes and buffaloes come to drink. These animals attract predators, which is why a lot of lions live in Tarangire. You will definitely see them during your trip.

In the dry season, the Tarangire River becomes the only source of drinking water for many kilometers around. Because of this, large herds of elephants come to Tarangire, making Tarangire the home to the largest population of elephants in Northern Tanzania for most of the year (especially June - October and December - March). Elephants are not at all intimidated by visitors to the park, and they often come quite close to cars. This is completely safe - since elephants have no enemies in their natural nature they are naturally curious and unafraid.

Tarangire National Park is also known for its ancient baobab trees. These massive trees are larger and older than any other park in continental Africa. The scenery, accented with these signatory trees is simply stunning.

3.Ngorongoro Conservation Area

Today you are going to the Legendary Ngorongoro Crater! Your day will begin early in the morning, when your guide arrives to drive you to the Ngorongoro Crater, part of the Ngorongoro Conservation Area. The Crater is somewhat reminiscent of The Lost World by Sir Arthur Conan Doyle: here you will witness tens of thousands of wild animals living in the massive crater left by a huge ancient volcano. The actual crater is relatively small, when you consider that it is home to the most variety of animals per square meter than anywhere else in the world! Here, you are sure to see a great number of animals within close proximity to one another.

The descent into the crater will take about half an hour of driving. The road passes through beautiful, lush forests with great scenery. Your safari guide will make a stop to see the 'look out' which is a place offering a stunning panoramic view of the entire crater. Contrary to popular myth, animals can go outside the caldera. However, most of them are safe and comfortable inside the caldera which provides an unlimited supply of fresh grass for grazers and easy prey for predators. Therefore, they prefer to remain in the crater t all the time.

Elephants, buffaloes, antelopes, lions, cheetahs, zebras and other African animals can be seen in Ngorongoro Crater. This is one of the few places in Africa where rhinos are found, although, remember that they are an endangered species, so there are very few of them. One animal that is absent are giraffes; you will not spot any of them in the crater because, due to the build of their bodies, including legs and long necks, they cannot walk down into the crater.

After your morning game drive around the crater, you will stop at the picnic area next to Lake Magadi for a snack and rest. This place is popular with various birds, including kites, who sometimes try to steal food right from the table! While not dangerous, at all, it is a good idea not to leave any food unattended. One of the draws of Lake Magadi are the hippos that live in the area. You're sure to enjoy watching them while you eat lunch. These huge animals stay close to the shore and often surface to get air. If you do see one walking out of the water, give it plenty of

space. Due to the large number of animals and endemic plants, Ngorongoro Conservation Area is a UNESCO World Heritage Site and renowned for its natural significance in the world.

Please do not feed animals in Ngorongoro or any other parks in Tanzania. Even if you really want to treat a small bird or monkey, you should not do this - you will only harm them. Human food disrupts the natural diet of animals and can lead to their early death!

Remember, this is not just our request. This is a law which is enforced by park rangers. Any person caught feeding wildlife or violating other park rules may be fined.

4.Ndutu Area In Ngorongoro

Today your safari will take place in the southwestern corner of Ngorongoro, in an area called Ndutu. It borders the Serengeti, from where animals often come to Ndutu in search of fresh grass. While there are very beautiful panoramic views, few other tourists venture here, meaning you will feel like you have the place to yourself.

The Ndutu area is on the Great Migration route and it is here, from late January to mid March, that the wildebeests give birth. During the calving months, visitors can see thousands of baby wildebeests arrive into the world. One of the unique traits of these animals is that newborn wildebeests can walk within a few minutes of birth, and run within a few hours! This ability is essential for survival in Tanzania's wild because predators see newborn wildebeests as easy prey. What is bad news for wildebeests is an excellent opportunity for safari-goers to spot all the Big Cats of Tanzania within a few days: lion, leopard, cheetah, serval and caracal.

5. **SERENGETI NATIONAL PARK**

Today you will go to the most famous safari park in the world - Serengeti. This is one of the largest parks in Tanzania and has a large population of wildlife. Here, you are sure to see: lions, antelopes, elephants, giraffes, buffaloes and zebras. There is a good chance of spotting cheetahs, serval cats and other rare animals of the African savannah. The Serengeti is a designated UNESCO World Heritage Site, chosen because of its important ecosystem, the dense population of animals and the annual Great Migration. Serengeti was the inspiration for Disney's "Lion King" feature film, but life here is not a cartoon - it is pure, wild and beautiful. The day will take place in the central Serengeti, in a remarkably beautiful area called Seronera.

6. **SERENGETI NATIONAL PARK — SERONERA**

Your adventure continues in the central part of the Serengeti. Seronera is a huge space, brimming with life. It is impossible to view it all in one day; today, your guide will show you new places and interesting animals, so that you can get a full perspective of Serengeti's Seronera. It is in the Serengeti that the rarest African animals live: rhinos, leopards, serval cats and caracals. This second day increases your chances of seeing these rare animals in the wild.

7. **SERENGETI NATIONAL PARK & TRANSFER TO ARUSHA TOWN**

This is your final day in central Serengeti. Every day in the savannah provides something new and exciting, you will not have a repeat of previous days, but will experience something genuinely new: yesterday's lazy lions might be on the prowl today, elephants that walked away will be curious today. A cheetah may even climb atop the safari car, for a chance to see you! It is also an excellent chance to see the famous Kopjes - these remnants of volcanic rock from ancient eruptions are a picturesque part of the Seronera landscape. Animals love to rest in their shade, providing ideal photographs of your time in Central Serengeti.

It's best to wrap up the safari slightly before midday, as the return journey to Arusha takes approximately six hours. You'll travel back through the Ngorongoro Conservation Area, with chances to spot baboons, elephants, and maybe even a cheetah along the way. Mid-route, you're welcome to stop at a scenic picnic site for lunch. By dinner time, you'll be back at your hotel in Arusha to relax and enjoy the evening.

Safari Cost Includes

Transfers

- All transfers described on the program

Accommodation & Meals

- Hotels and lodges described on the program
- Meals described on the program
- Bottled water, soft drinks, hot coffee and tea while in the jeep on safari

Guiding & Game-Driving

- Certified and experienced English-speaking safari guide
- Comfortable Land Cruiser 4x4s with pop-up roof, fridge, Wi-Fi, and power outlets
- National park fees for the entire tour (park entry fees and concession fees)
- Free Wi-Fi. Signal will be available in only 60-75% of the travelled territories due to lack of cell coverage in the wilderness areas
- 24/7 phone support service
- Air Ambulance Service by AMREF Flying Doctors
- Binoculars (1 pc per SUV)
- Medical kit

Safari Cost Excludes

- Air tickets;
- Visa fee;
- Travel insurance;
- Tips to your safari guide ($20-50 per day per car).

Please note:

- By default our tours include shared accommodation in twin/double rooms, unless requested and agreed otherwise. Single supplement is available upon request. Please refer to the program to see your accommodation arrangements
- Moshi and Arusha-based accommodations usually include breakfast only, unless requested and agreed otherwise. Please refer to the program to see your meal plans on each night
- Most safari lodges usually do not include tea, coffee, soft and alcoholic drinks not to have you overpay for beverages you don't need. You will be able to order and pay for drinks at the hotels' restaurants
- Tented lodges are the most common type of accommodation in savannah. Many of them work on solar energy. This sometimes means bucket showers, limited wi-fi and no hair dryers, all in an effort to reduce environmental impact. We encourage you to do some basic research on the accommodations in your program to ensure the safari matches your travel style

December - March
Experience the calving season for wildebeest and zebra in the southern Serengeti, increasing your chances of witnessing the Great Migration. Enjoy the warmest temperatures of the year and lush, green landscapes early in the period.

April - May
Take advantage of fewer tourists and a lush, leafy environment during the long rainy season. Enjoy pleasant temperatures, but be prepared for potential road conditions and the need to keep vehicle windows closed during heavy downpours.

June - September
This long dry season offers excellent game viewing as vegetation thins and wildlife congregates around water sources. It's an ideal time to witness wildebeest and zebras crossing the Mara River. Expect dry weather and fewer mosquitoes, but also the highest number of tourists.

October - November
Enjoy amazing wildlife viewing in Tarangire as the animals gather near the Tarangire River. Witness the great migration returning to the Serengeti. Be prepared for potential short rains, which often occur in the evening or night and can result in fewer crowds and a greener landscape.
